

Peyton is a lighting designer, an experienced control systems and lighting technician, and holds a BFA in Theatrical Lighting Design from the nationally recognized conservatory of The Theatre School at DePaul University in Chicago, IL. He has focused on technical integration in art since being Technical Director of his high school's theatre facility, to managing national tours for a local independent rock band from his home town of Seattle, Washington. He has studied lighting systems integration since he could get his hands on a light board and quickly learned how to use several types of systems for multiple applications. He draws heavily on this knowledge now, reviewing fixture specifications, dimming, and control layouts for BIRKENSTOCK LIGHTING DESIGN.

PEYTON SMITH
Lighting Designer
bio

His final year at college, Peyton designed a motion-detection and automation projection system, to be installed in the foyer of the school's lobby. The title of this piece, "Threshold," references high contrast actions and distillation of a theme down to its elemental levels.

Peyton also has several compelling design credits to his name. He designed The Theater School's premiere production in a brand new 75 million dollar facility designed by César Pelli and Pelli Clarke Pelli Architects, illuminating a rotating cast of notable alumnus including Gillian Anderson and John C. Reilly. While in production of this show, he designed a classmate's Masters in Stage Direction thesis project, the U.S. premiere of *Moth* by Declan Greene.

Peyton excels in finding ways to increase efficiency of system implementation to reduce redundancy and increase accuracy across projects. He has fluency with many design programs including Autocad, AGi32, Adobe Creative Suite, and Revit, among the host of applications used at BIRKENSTOCK LIGHTING DESIGN to evaluate and pre-visualize a project during the design process.

Experience / Lighting Design

Birkenstock Lighting Design / San Rafael, CA

- 2016-present
- Lighting Designer
 - Fixture Layouts, selection, and specifications
 - Assists in budget and VE efforts.
 - Assists all aspects of production and detailing (AutoCAD and REVIT)
 - Performs lighting calculations (AGi32, Visual)
 - 3D presentation production for interior spaces and light renderings
 - Studies and creates 3D Models for the purposes of understanding architecture and interiors
 - Conducts Design and code research
 - Constructs in house mock ups
 - Assists with presentations for Clients

- Education
- BFA Theatrical Lighting Design, The Theatre School at DePaul University, Chicago IL
